Summary

Third-year Computer Science student on a gap year with hands-on experience building backend services, developer tools, and API-integrated projects in C#, JavaScript, Python, and .NET Core.

Skills

Programming Languages: Java, Python, C#, JavaScript, TypeScript, Haxe
Web Tech & Frameworks: React, Node.js, HTML, CSS, Tailwind, Mantine UI
Backend & APIs: .NET Core, ASP.NET Core, RESTful APIs, JSON, Client–Server Architecture, Authentication (basic)
Cloud & DevOps: Microsoft Azure (App Services, Azure SQL Database, Resource Groups, Deployment & Hosting), Git/GitHub
Databases: SQL (basic), Relational Databases, CRUD operations, Azure SQL (familiar)
Concepts: Object-Oriented Programming (OOP), Debugging, System Architecture (basic), Data Analytics, Secure Coding Practices, Security Fundamentals, Data Structures, Agile Methodologies

Education

IIE Emeris (formerly IIE Varsity College) Feb. 2024 – Dec. 2025
Bachelor of Computer and Information Sciences in Application Development

Pretoria Boys High School Feb. 2019 – Dec. 2023
Matric

Projects

SQLite Clone | *C#*
- Implemented a lightweight SQLite-inspired database engine with file-based storage, query parsing, and CRUD operations
- Developed low-level system logic and debugging strategies to ensure data persistence and integrity
- Gained hands-on experience in storage design and performance-focused systems programming

Phishing URL & Email Analyzer | *Python*
- Built a command-line phishing triage tool that extracts and analyzes URLs from raw email text
- Implemented rule-based detection across 7 phishing indicators (IP-based links, URL shorteners, subdomain abuse, urgent language) and flagged sender–domain mismatches
- Validated the analyzer with 4 unit tests and 2 sample emails; generates Markdown risk reports for analysts

League of Legends Stat Bot | *Python, Riot Games API, Discord*
- Created a Discord bot that retrieves and displays player stats using the Riot Games API
- Implemented backend services for data fetching and caching, plus interactive frontend components for real-time updates
- Worked on API integration, authentication, and handling rate limits to maintain data consistency

Duo-Trace | *JavaScript, Riot Games API*
- Built a tool that identifies shared League of Legends match history between two Riot IDs by cross-referencing match data from the Riot Games API
- Implemented API integration with authentication and rate-limit handling to reliably fetch and compare match records across accounts
- Fetches match-history IDs in batches of 100 and caches match details for 30 days; verified with 4 Worker tests

Activities

Literature, Programming, Art, Fencing, Movie reviewing, Gaming
