Third-year Computer Science student (on gap year) with a strong foundation in software development, security fundamentals, and system design. Passionate about cybersecurity, threat analysis, and defensive security practices, demonstrated through hands-on projects in phishing detection and secure coding. Experienced with Python, cloud environments, and RESTful APIs. Eager to grow within a cybersecurity operations team and contribute to real-world incident response and cyber risk management.

Experience

JANUARY 2022 – NOVEMBER 2023

Vice-Captain | Fencing Club | Pretoria Boys-Highschool

Assisted in leading and mentoring the fencing team as Vice-Captain at Pretoria Boys High. Helped guide the team to winning the GFA Schools League Trophy through improved discipline, teamwork, and performance. Encouraged participation, supported teammates on a personal level, and fostered a positive team culture. Recognised for leadership, commitment, and driving transformative change within the team.

Skills

Programming Languages: Java, Python, C#, JavaScript, TypeScript, Haxe

Web Tech & Frameworks: React, Node.js, HTML, CSS, Tailwind, Mantine UI

Backend & APIs: .NET (Core), ASP.NET Core, RESTful APIs, JSON, Client–Server Architecture, Authentication (basic)

Cloud & DevOps: Microsoft Azure (App Services, Azure SQL Database, Resource Groups, Deployment & Hosting), Azure Portal Management, Git/GitHub

Databases: SQL (basic), Relational Databases, CRUD operations, Azure SQL (familiar)

Tools & Platforms: Git/GitHub, Azure

Concepts: Object-Oriented Programming (OOP), Debugging, System Architecture (basic), Data Analytics, Threat Analysis (basic), Phishing Detection, Vulnerability Assessment (basic), Network Security Concepts, Incident Response Awareness, OWASP Awareness, CompTIA Security+ (self-studying).

Education

FEBRUARY 2024 – DECEMBER 2025

Bachelor of Computer and Information Sciences in Application Development | IIE Emeris (Formerly IIE Varsity College)

FEBRUARY 2023 – DECEMBER 2023

Matric | Pretoria Boys-Highschool

Activities

Literature, Programming, Art, Fencing, Movie reviewing, Gaming

Projects

SQLite Clone — C#

Built a lightweight SQLite-inspired database engine implementing file storage, basic queries, and CRUD operations; gained hands-on experience with data persistence, debugging, and low-level system logic.

Local Services Marketplace — React & Node.js

Developing a marketplace web app connecting users with local service providers; built frontend components with React/TypeScript and backend API endpoints in Node.js, practicing client–server architecture and debugging.

League of Legends Stats Website — React & Node.js

Created a web app displaying player stats using the Riot Games API; implemented interactive frontend components and backend services for data fetching and caching, gaining experience in API integration, authentication, and real-time data handling.

Phishing URL & Email Analyzer — Python

Built a command-line phishing triage tool that extracts and analyses URLs from raw email text; implements rule-based detection of phishing indicators including IP-based links, URL shorteners, subdomain abuse, and urgent language patterns; flags sender–domain mismatches and generates structured markdown reports with risk ratings suitable for security analysts.
